

AI CHATBOT DEVELOPMENT PROJECT

Internship Project

PROJECT OBJECTIVE

Develop an AI-powered chatbot using a client-server architecture that accepts user prompts, processes them via the Google Gemini AI model, and displays AI-generated responses.

TECHNOLOGIES USED

HTML

CSS

JavaScript

Node.js

Express.js

Google Gemini AI

GitHub

Render

INTERNSHIP DURATION

1 June 2026 – 15 July 2026

Team Details

AI Chatbot Development — Group 4

MENTOR

Dr. Ritu Jain G

U2U Technology Team

STUDENT

Sanjivani Pandurang Jadhav

B.Tech, Information Technology

UMIT, SNDT Women's University, Mumbai

KEY PROJECT CONTRIBUTIONS

Frontend and Backend Integration

AI Model Integration

API Development and Testing

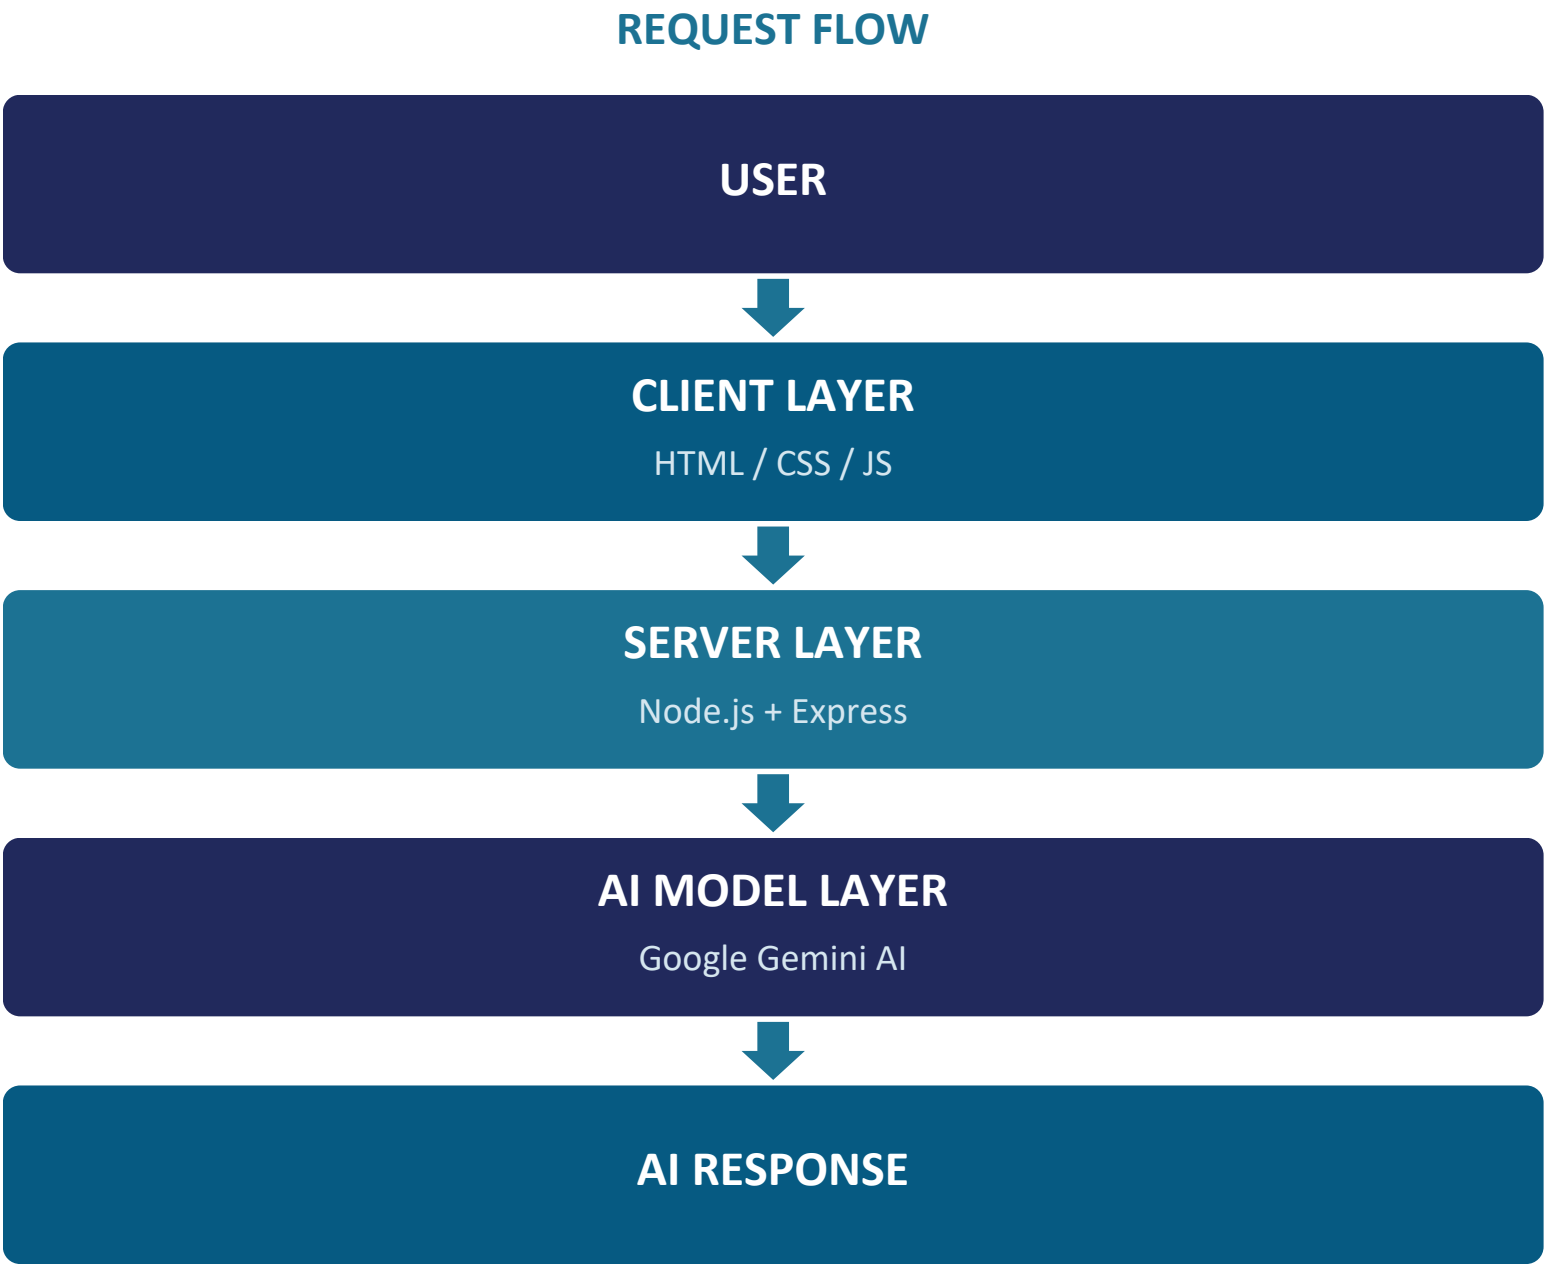

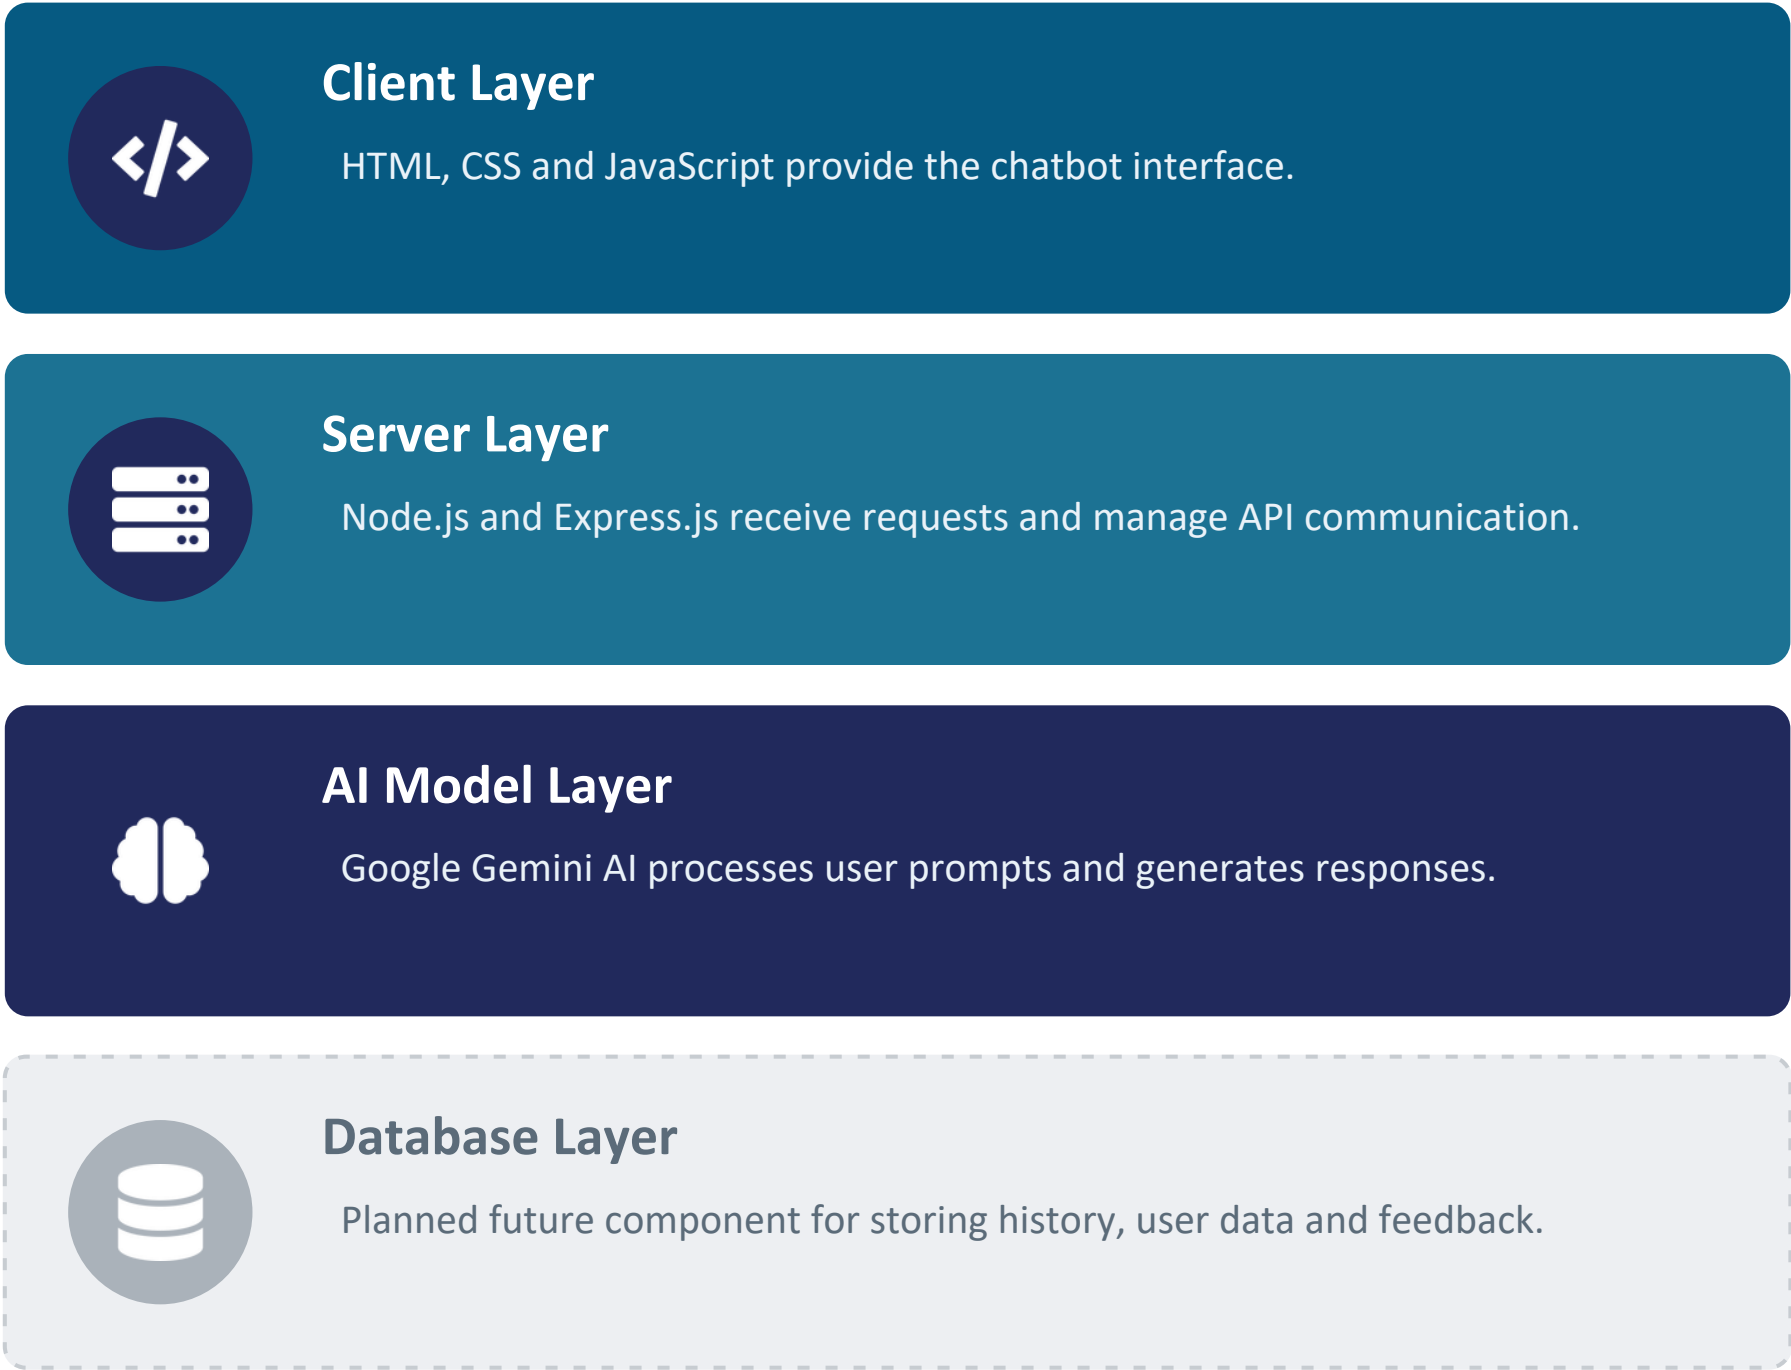

GitHub Documentation

Cloud Deployment

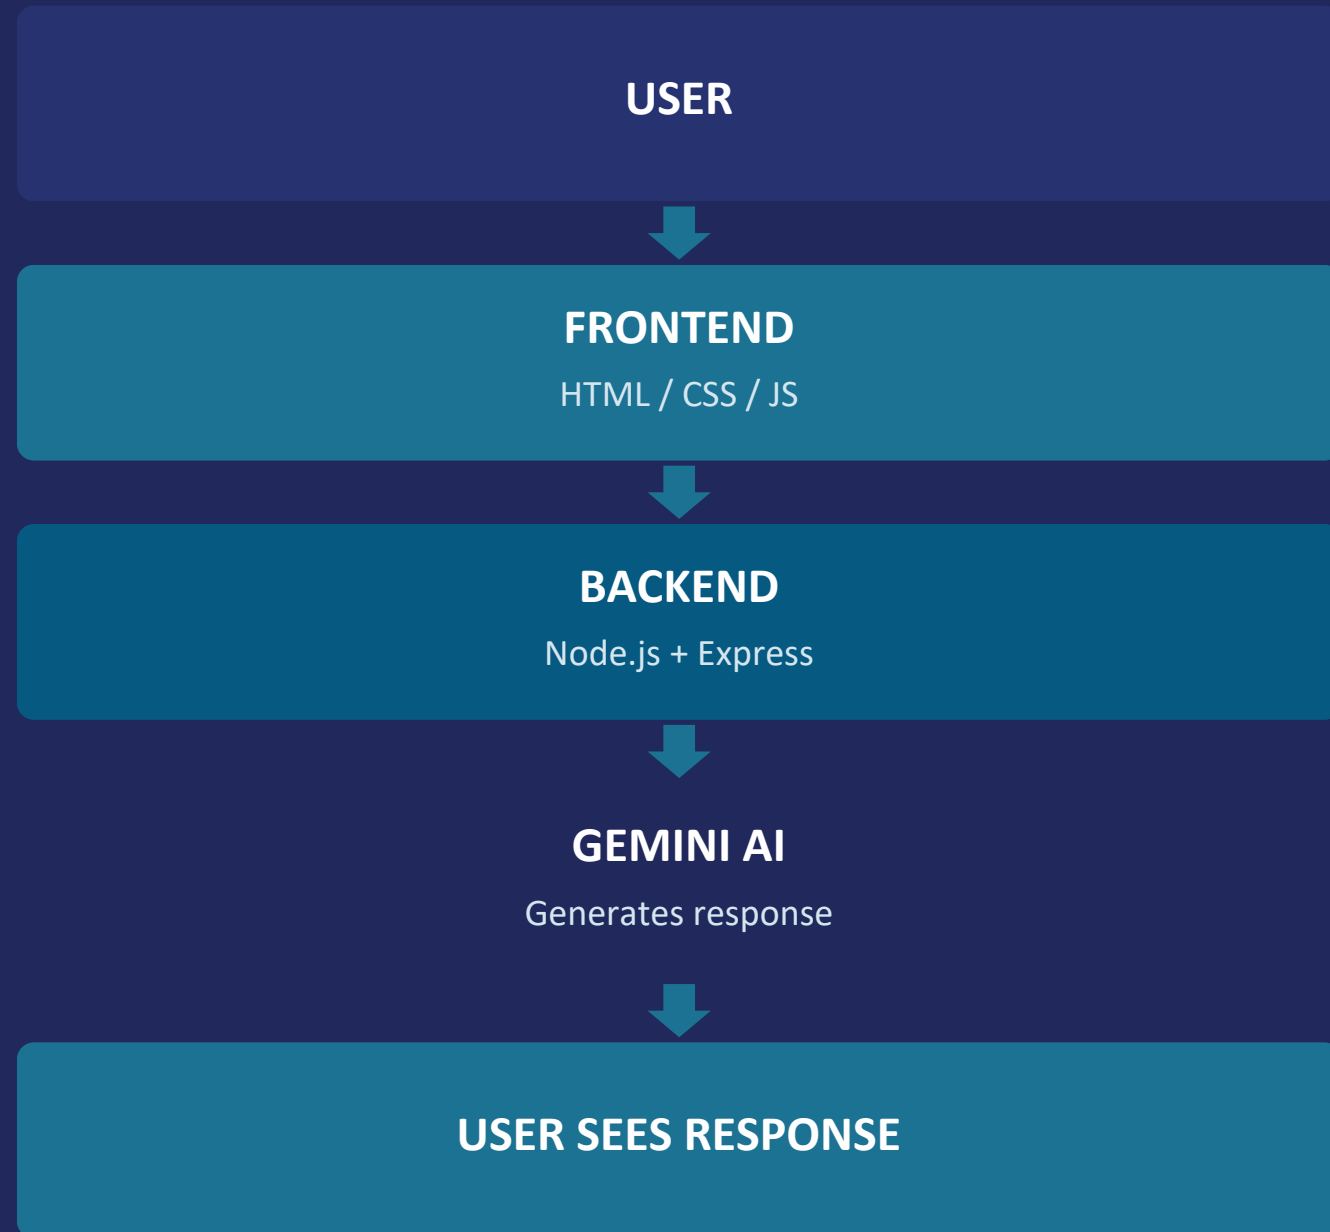

AI Chatbot System Architecture

End-to-End AI Chatbot Workflow

FLOW

1 User enters a prompt in the chatbot interface

2 Frontend sends the prompt via POST /api/chat

3 Node.js and Express.js receive and validate the request

4 Prompt is sent to Google Gemini AI

5 Gemini AI processes the prompt and generates a response

6 Response is returned to the backend

7 Backend sends the response to the frontend

8 AI-generated response is displayed to the user
